

Eyal Microwave

Founded in 1986, Eyal Microwave Ltd. (EMI) is an innovator in the design and manufacture of high performance microwave applications over a broad range of products from components to subsystems, covering a frequency range of 0.1 ?50 GHz. Eyal Mag, a subsidiary of Eyal Microwave, was founded in 1998. Eyal Mag is the developer, designer and manufacturer of state of the art high quality Multi-Carrier Power Amplifiers (MCPA's). Following an intensive selection process, Eyal Mag received significant orders for it's MCPA systems for supply and deployment with major Korean Mobile Telecommunications Service Providers with CDMA-2000 and W-CDMA networks. . In October 2002 Eyal Mag Ltd. initiated the development of the Digital Base Band Predistortion LPA. Since this time, Most of our R&D personnel have participated in the development project in which the company has invested considerably. Eyal Mag views the development of the amplifier as a central strategic goal for the next few years and hopes to reach the status of commercial production of the product by June 2004.
